

Janus Atlas Timeframe Guide

Multi-Timeframe Liquidity Analysis & Configuration

What Is Janus Atlas?

Janus Atlas is Signal Pilot's liquidity detection system. It identifies: - **Liquidity sweeps** (stop hunts) - **Liquidity pools** (where stops cluster) - **Sweep + reclaim patterns** (high-probability reversal setups)

Named after the two-faced Roman god Janus, it looks both ways—at liquidity taken AND liquidity remaining.

Core Functionality

FEATURE	WHAT IT DOES
Sweep Detection	Identifies when price breaks a level briefly and reverses
Pool Marking	Shows where liquidity likely clusters
Reclaim Signals	Fires when price sweeps AND reclaims a level
Multi-TF Pools	Displays liquidity from higher timeframes

Timeframe Settings Overview

The Two Timeframe Modes

MODE	DESCRIPTION	USE CASE
Single TF	Shows liquidity for current chart only	Simple, clean display
Multi-TF	Shows liquidity from 2-3 timeframes	Full context, confluence

Single Timeframe Configuration

Settings

SETTING	DEFAULT	OPTIONS
Lookback Period	20	10-50 bars
Sweep Sensitivity	Normal	Low/Normal/High
Show Pool Zones	On	On/Off
Reclaim Candles	3	1-5 bars

Lookback Period Explained

Lookback = How many bars back to identify swing highs/lows

Short (10-15): More levels, more signals, more noise

Medium (20-30): Balanced, default recommendation

Long (40-50): Fewer levels, major swings only

Sweep Sensitivity

LEVEL	TRIGGER	BEST FOR
Low	Must break level by 0.5%+	Major sweeps only
Normal	Must break level by 0.2%	Standard trading
High	Any break counts	Scalping, every sweep

Multi-Timeframe Configuration

Recommended TF Combinations

YOUR TRADING TF	HTF 1	HTF 2	HTF 3
1m	5m	15m	—
5m	15m	1H	—
15m	1H	4H	—
1H	4H	Daily	—
4H	Daily	Weekly	—
Daily	Weekly	Monthly	—

Multi-TF Display Settings

SETTING	OPTIONS	RECOMMENDATION
HTF Pool Color	Customizable	Distinct from current TF
HTF Pool Style	Solid/Dashed	Dashed (differentiate)
Show HTF Labels	On/Off	On (identify source TF)
HTF Pool Opacity	10-100%	50% (visible but not dominant)

Timeframe-Specific Strategies

Scalping (1m-5m Charts)

Settings:

- Lookback: 10-15
- Sensitivity: High
- Show HTF Pools: 15m, 1H
- Reclaim Candles: 1-2

Focus: Quick sweeps at HTF levels, fast reclaims

Key insight: HTF liquidity pools on 1m chart = high-conviction levels

Day Trading (15m-1H Charts)

Settings:

- Lookback: 20
- Sensitivity: Normal
- Show HTF Pools: 4H, Daily
- Reclaim Candles: 3

Focus: Session high/low sweeps, Daily level sweeps

Key insight: Look for sweeps at yesterday's high/low, session extremes

Swing Trading (4H-Daily Charts)

Settings:

- Lookback: 30
- Sensitivity: Normal
- Show HTF Pools: Weekly, Monthly
- Reclaim Candles: 3-5

Focus: Major swing point sweeps, weekly level sweeps

Key insight: Weekly liquidity pools = major reversal zones

Position Trading (Weekly+ Charts)

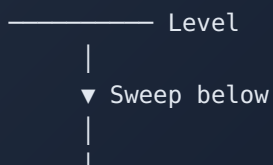

Settings:

- Lookback: 40-50
- Sensitivity: Low
- Show HTF Pools: Monthly only
- Reclaim Candles: 5

Focus: Major structural sweeps only

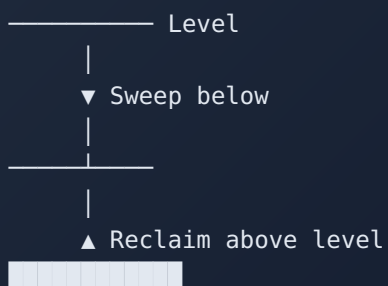

Understanding Sweep Types

Type 1: Simple Sweep

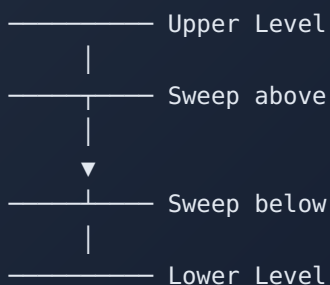

Price breaks level briefly, returns. Basic pattern.

Type 2: Sweep + Reclaim

Price breaks level, returns, AND closes back above. **Strong signal.**

Type 3: Double Sweep

Both sides taken in quick succession. **Very strong reversal signal.**

Multi-TF Confluence Scoring

CONFLUENCE LEVEL	WHAT YOU SEE	SIGNAL STRENGTH
Maximum	Sweep at pool visible on 3 TFs	Highest conviction
Strong	Sweep at pool visible on 2 TFs	High conviction
Standard	Sweep at current TF pool only	Normal conviction
Weak	Sweep without pool marking	Lower conviction

Session-Based Settings

London Session (02:00-10:00 EST)

Focus: Sweeps of Asian session high/low
HTF Pools: Show Daily, 4H
Sensitivity: Normal to High

Common pattern: Sweep Asian high → reverse for London

New York Session (08:00-16:00 EST)

Focus: Sweeps of London high/low, OR previous day
HTF Pools: Show Daily, Weekly
Sensitivity: Normal

Common pattern: Sweep London high → continuation OR reversal

Asian Session (20:00-02:00 EST)

Focus: Sweeps within range, setting up for London
HTF Pools: Show 4H, Daily
Sensitivity: Low (less volatility)

Common pattern: Range-bound, building liquidity for London

Janus + Pentarch Integration

JANUS SIGNAL	PENTARCH CONFIRMATION	RESULT
Sweep below pool	TD fires	High-conviction long setup
Sweep + Reclaim	IGN fires	Breakout confirmation
Sweep above pool	WRN fires	Late-cycle warning
Double sweep	TD + IGN sequence	Strong reversal

Visual Display Guide

Pool Zone Colors (Recommended)

POOL TYPE	COLOR	MEANING
Current TF Support Pool	Green (transparent)	Buy-side liquidity below
Current TF Resistance Pool	Red (transparent)	Sell-side liquidity above
HTF Support Pool	Blue (dashed)	Major buy-side liquidity
HTF Resistance Pool	Orange (dashed)	Major sell-side liquidity

Signal Markers

MARKER	MEANING
▼ below candle	Sweep of lows detected
▲ above candle	Sweep of highs detected
★	Sweep + Reclaim (strongest)

Optimization Checklist

Weekly Settings Review

- ☐ Are sweeps being detected at obvious levels?
- ☐ Too many pool zones? Increase lookback
- ☐ Missing sweeps? Decrease lookback or increase sensitivity
- ☐ HTF pools aligning with major S/R?
- ☐ Reclaim signals giving enough time? Adjust reclaim candles

Before Each Session

- ☐ Identify key liquidity pools for the day
- ☐ Note HTF pools that may be swept
- ☐ Mark previous session high/low
- ☐ Check daily/weekly level proximity

Troubleshooting

PROBLEM	CAUSE	SOLUTION
Too many pools	Lookback too short	Increase to 30+
Missing obvious sweeps	Sensitivity too low	Increase sensitivity
HTF pools cluttering chart	Too many TFs shown	Limit to 2 HTFs
Sweeps not reclaiming	Reclaim candles too few	Increase to 4-5
Pools not at key levels	Looking at wrong swings	Check lookback period

Non-Repainting Guarantee

- Sweep detection only fires on closed bars
- Pool zones calculated from historical swings (don't move)
- Reclaim signals require candle close above/below
- All signals are permanent once rendered
