Augury Grid v1.0 Guide

Multi-Symbol Scanner with Quality Scoring

What is Augury Grid?

Augury Grid is Signal Pilot's **multi-symbol screening table** that monitors **7 symbols across 3 timeframes** simultaneously—totaling 21 scans. It displays ranked signals with quality scores, entry/exit levels, and real-time P&L tracking.

Display Overview

Augury Grid shows a professional table with **9 columns**:

COLUMN	SHOWS
#	Rank by quality score
Sym	Symbol/ticker
TF	Timeframe
Bias	Direction + star rating
Age	Time since signal
Entry	Entry price
SL	Stop loss level
TP	Take profit level
P&L	Current profit/loss

Signal Quality Scoring

Signals receive a 0-100 quality score displayed as stars:

STARS	SCORE RANGE	MEANING
⭐	70-84	Basic quality signal
⭐⭐	85-94	Good quality signal
⭐⭐⭐	95-100	Excellent quality signal

Multi-Timeframe Confluence Indicators

- 🔗 = 2 timeframes agree on direction
- 🔗🔗 = All 3 timeframes aligned (highest conviction)

Lifecycle Indicators

INDICATOR	MEANING
⏳ + blockers	Signal pending, shows what's missing (MACD, Trend, EMA200, ADX, RSI, Volume, Momentum)
💀 SL Hit	Position stopped out
💀 Stale	Signal expired (>30 days old)

Adjustable Settings

Display Configuration

SETTING	OPTIONS
Mobile Mode	On/Off (simplified layout)
Text Size	Tiny, Small, Normal, Large
Position	4 corner locations
Column Visibility	Toggle each of 9 columns

Signal Detection Tuning

SETTING	RANGE	DEFAULT	DESCRIPTION
ADX Minimum	10-40	20	Trend strength threshold
RSI Range Low	20-80	40	Oversold boundary
RSI Range High	20-80	60	Overbought boundary
Volume Spike	1.0-3.0×	1.3	Volume multiplier for detection
Extension ATR	1.0-5.0	2.5	Price extension threshold

Position Management

SETTING	DESCRIPTION
SL ×ATR	Stop loss distance (ATR multiplier)
TP1 ×ATR	First take profit distance
TP2 ×ATR	Runner take profit distance

Filtering & Timeframe Options

SETTING	DEFAULT	DESCRIPTION
Min Score	70	Minimum quality to display
Show Top N	7	Maximum rows shown
TF 1	15m	First timeframe to scan
TF 2	4H	Second timeframe to scan
TF 3	Daily	Third timeframe to scan
Symbol Preset	Various	8 built-in watchlists + custom

Built-In Symbol Presets

Augury Grid includes 8 pre-configured watchlists:

1. **Crypto Major** - BTC, ETH, and major altcoins
2. **Forex Major** - EUR/USD, GBP/USD, USD/JPY, etc.
3. **US Indices** - SPY, QQQ, DIA, IWM
4. **Commodities** - Gold, Silver, Oil, etc.
5. **Tech Stocks** - AAPL, MSFT, GOOGL, etc.
6. **Custom 1-3** - User-defined symbol lists

How to Use Augury Grid

Morning Scan Workflow

1. Open Augury Grid on preferred chart
2. Review ranked signals by quality

3. Look for ⭐⭐⭐ and 🔗🔗 indicators

4. Click through to symbols with best setups

5. Confirm with detailed analysis

Signal Interpretation

WHAT YOU SEE	WHAT IT MEANS
BULL ⭐⭐⭐ 🔗🔗	High-quality long, all TFs aligned
BEAR ⭐⭐ 🔗	Good short, 2 TFs agree
⏳ [ADX, VOL]	Signal pending, needs more trend strength and volume
💀 SL Hit	Previous signal stopped out

Filtering Best Setups

Use the Min Score filter to show only high-quality signals: - **Score 85+** = Show only good/ excellent signals - **Score 70+** = Show all qualifying signals - **Score 95+** = Show only exceptional signals

Timeframe Selection

For Day Trading

- TF1: 5m or 15m

- TF2: 1H

- TF3: 4H

For Swing Trading

- TF1: 1H

- TF2: 4H

- TF3: Daily

For Position Trading

- TF1: 4H

- TF2: Daily

- TF3: Weekly

Integration with Other Indicators

Augury Grid as Scanner

Use Augury Grid to find opportunities, then switch to that symbol's chart with full indicator stack (Pentarch, Volume Oracle, Janus Atlas) for detailed analysis.

Workflow Example

1. Augury shows BTCUSD ⭐⭐⭐ 🔗🔗 BULL

2. Switch to BTCUSD chart

3. Confirm with Pentarch (looking for TD or IGN)

4. Check Volume Oracle (should show Accumulation)

5. Find entry level with Janus Atlas

6. Execute trade

Blocker Indicators

When a signal shows ⏳ with blockers, these indicate what conditions aren't met:

BLOCKER	MEANING
MACD	MACD not confirming direction
Trend	EMA trend not aligned
EMA200	Price on wrong side of 200 EMA
ADX	Trend strength too weak
RSI	RSI in unfavorable zone
Volume	Volume confirmation missing
Momentum	Momentum not confirming

Signals fire when enough conditions clear. Blockers help you understand why a setup isn't ready yet.

Best Practices

1. **Use as a scanner, not a signal system** - Always confirm with full analysis
2. **Prioritize 🔗🔗 setups** - Multi-TF alignment = highest probability
3. **Check blockers** - Understand why signals are pending
4. **Customize for your style** - Adjust TFs and presets to match your trading
5. **Don't chase stale signals** - Fresh signals (low Age) are better

For multi-symbol trading strategies, see the Education Hub curriculum on watchlist management and opportunity scanning.
