Janus Atlas Advanced Trading Checklist

From Lesson 20: Janus Atlas Advanced

Use this checklist for double sweeps, multi-TF confluence sweeps, and sweep-and-reclaim patterns.

📋 Pre-Trade: Advanced Sweep Analysis

Single Sweep Setup

- [ ] **Identify sweep level**
- Support/resistance: $__
- Janus marked sweep to: $__
- Sweep depth: __ points/ticks below support

- [ ] **Verify reclaim**

- Reclaim within 1-3 candles? Yes / No

- Reclaim price: $__

- Volume spike on reclaim? Yes / No

- Footprint delta: +/- __ (absorption vs. exhaustion)

Double Sweep Setup (Highest Probability)

- [ ] **First sweep detected**

- Time: __

- Sweep level: $_ → $_

- Reclaim: $__

- Result: Rallied to $__ then returned

- [ ] **Second sweep (deeper)**

- Time: __ (10-60 min after first?)

- Sweep level: $_ → $_ (DEEPER than first?)

- Footprint delta: +/- __ (> 5,000 = strong)

- Reclaim: $__ (within 1-3 candles?)

- [ ] **Double sweep confirmed**

- Second sweep cleared BOTH stop clusters (first sweep + early longs)

- Massive absorption indicated (footprint +8,000+ delta)

- All stops cleared, price free to move

🔍 Multi-Timeframe Sweep Confluence

Check for level alignment across timeframes:

- [ ] Daily support/resistance: $_

- [ ] 4H support/resistance: $_

- [ ] 1H support/resistance: $__

- [ ] All three align at same level? Yes / No

If YES → Massive liquidity cluster:

- Daily stops: Long-term traders (millions)

- 4H stops: Swing traders (hundreds of thousands)

- 1H stops: Day traders (thousands)

- **Total liquidity:** $_____M+ estimated

- **Sweep probability:** Highest (A+ setup)

✅ Advanced Setup Criteria

A+ Double Sweep Criteria:

- [ ] First sweep: $_ → $_

- [ ] Second sweep: DEEPER ($_ → $_)

- [ ] Footprint absorption: +10,000+ delta

- [ ] Janus confirms double sweep pattern

- [ ] HTF trend supports direction

- [ ] Volume Oracle = Trending

A+ Multi-TF Confluence Criteria:

- [ ] Daily + 4H + 1H all converge at $__

- [ ] Janus sweep detected on all three timeframes

- [ ] Massive liquidity pool confirmed

- [ ] Plutus POC alignment at same level

- [ ] Absorption indicated on sweep

A Sweep-and-Reclaim Criteria:

- [ ] Sweep to $__

- [ ] IMMEDIATE reclaim (1-3 candles) to $__

- [ ] Volume spike + positive/negative delta

- [ ] Failed breakdown/breakout confirmed

- [ ] Order book showed defense at level

🎯 Trade Execution by Pattern

Double Sweep Trade:

- **Entry:** $__ (above second sweep reclaim)

- **Stop:** $__ (below second sweep + buffer)

- **Target 1:** $__ (previous high) = ____R

- **Target 2:** $__ (HTF resistance) = ____R

- **Position size:** __ (2% risk, A+ setup)

Sweep-and-Reclaim Trade:

- **Entry:** $__ (close above/below reclaim level)

- **Stop:** $__ (beyond sweep + ATR)

- **Target:** $__ (HTF level) = ____R

- **Position size:** __ (1.5-2% risk)

🔴 Failed Sweep Recognition

Signs of failed sweep:

- [ ] No reclaim within 5 candles

- [ ] Price continues through swept level

- [ ] Negative/positive delta (opposite of expected)

- [ ] HTF structure breaking in same direction

If failed sweep detected:

- Time: _

- Failed at: $_

- Breakdown to: $_

- **Action:** Exit longs / Enter shorts (trade opposite direction)

- **Stop:** $_ (above failed sweep level)

- **Target:** $__ (next support) = ____R

🎛️ Confluence Confirmation

Stack these with Janus sweep:

- [ ] Plutus Flow: CVD positive/negative? +/- _

- [ ] Volume Oracle: Trending regime? Yes / No

- [ ] Harmonic Oscillator: Oversold/overbought? 5/5 agreement? Yes / No

- [ ] Order book: Imbalance supporting? Ratio: _

Total confluence: ____/5

If 4-5/5 → Highest conviction (A+ setup)

🚫 Invalidation Criteria (Exit Immediately)

- [ ] Failed to reclaim within 5 candles (failed sweep)

- [ ] HTF structure breaks against position

- [ ] Footprint shows exhaustion (opposite delta)

- [ ] Second sweep is shallower than first (not true double sweep)

- [ ] Stop loss hit

📊 Post-Trade Review

Sweep pattern analysis:
- Pattern type: Single / Double / Multi-TF / Sweep-and-Reclaim
- Confluence score: _/5
- **Reclaim timing: __ candles (within 1-3? ✓)**
- **Footprint delta: +/- _____ (absorption confirmed? ✓)**

What went right:
- _____

What could be improved:
- _____

Lesson learned:
- _____

Win/Loss: _ R-multiple: _

Remember:
- ✅ Double sweeps = highest probability (cleared all stops)
- ✅ Multi-TF confluence = massive liquidity grab
- ✅ Sweep + reclaim within 1-3 candles = valid
- ✅ Failed sweep (no reclaim in 5 candles) = trade opposite

This is for educational purposes only. Not financial advice.
